

## Chapter Six

# Linking Log

More than likely if you are reading this section you have decided to or are contemplating building the Linking Log style. You will be pleased with the strong construction and extremely functional design. And, your yard will look awesome!

## Section 6.1 – Preparation and Planning

### **Diagrams, Plans and Patterns**

Unlike the Elegant style, with the Linking Log style you will **not** be concerned with segments and the visual appeal tier placement. In addition, you will **not** need as detailed a plan or pattern as with the Elegant style. There is less room for error with the Linking Log style, but on the contrary, the Elegant style gets its name for a reason; it looks more elegant.

The pattern for the Linking Log style is extremely simple. It is simply the shape of the design you have created with dimensions for the complete lengths and is used more for the purchase of your materials than for the actual construction. The diagram below would totally suffice for a simple rectangular pattern.
